Inblem 5.3.1.

Sol.
$$|A| = \begin{vmatrix} 2 & 5 \\ 1 & 4 \end{vmatrix} = 3$$
 $|B_1| = \begin{vmatrix} 1 & 5 \\ 2 & 4 \end{vmatrix} = -6$ $|B_2| = \begin{vmatrix} 2 & 1 \\ 1 & 2 \end{vmatrix} = 3$

$$\chi_1 = \frac{|B_1|}{|A|} = -2 , \quad \chi_2 = \frac{|B_2|}{|A|} = 1.$$

$$|A| = \begin{vmatrix} 2 & 1 & 0 \\ 1 & 2 & 1 \end{vmatrix} = 4 \quad |B_1| = \begin{vmatrix} 1 & 1 & 0 \\ 0 & 1 & 2 \end{vmatrix} = 3 \quad |B_2| = \begin{vmatrix} 2 & 1 & 0 \\ 1 & 0 & 1 \end{vmatrix} = -2 \quad |B_3| = \begin{vmatrix} 21 & 1 \\ 12 & 0 \end{vmatrix} = 1$$

$$|S_0|, \quad \chi_1 = \frac{|B_1|}{|A_1|} = \frac{3}{4}, \quad \chi_2 = \frac{|B_2|}{|A_1|} = -\frac{1}{4}, \quad \chi_3 = \frac{|B_3|}{|A_1|} = \frac{1}{4}$$

Roblem 5.3.5.

Sol. As the first column of A equal to b, $\det A = \det B_1$, for matrix B_2 and B_3 , there exist two same column so the matrix is singular and this make $\det B_2$ and $\det B_3$ equal to zero, therefore $x_1 = \frac{|B_1|}{|A|} = 1$, and $x_2, x_3 = 0$.

Problem 5.3.6.

Sol. (a)
$$CT = \begin{bmatrix} 3 & -2 & 0 \\ 0 & 1 & 0 \\ 0 & -7 & 3 \end{bmatrix}$$

$$A^{-1} = \frac{C^{T}}{\text{olet}A} = \frac{C^{T}}{3} = \begin{bmatrix} 1 & -\frac{1}{3} & 0 \\ 0 & \frac{1}{3} & 0 \\ 0 & -\frac{7}{3} & 1 \end{bmatrix}$$

$$(b) C^{T} = \begin{bmatrix} 3 & 2 & 1 \\ 2 & 4 & 2 \\ 1 & 2 & 3 \end{bmatrix}$$

$$A^{-1} = \frac{C^{T}}{\text{olet}A} = \frac{C^{T}}{4} = \begin{bmatrix} \frac{3}{4} & \frac{1}{2} & \frac{1}{4} \\ \frac{1}{4} & \frac{1}{4} & \frac{1}{4} & \frac{1}{4} \end{bmatrix}$$

Problem 5.3.8.

Sul.
$$C = \begin{bmatrix} 6 & -3 & 0 \\ 3 & 1 & -1 \\ -6 & 2 & 1 \end{bmatrix}$$
, $AC^T = \begin{bmatrix} 3 & 0 & 0 \\ 0 & 3 & 0 \\ 0 & 0 & 3 \end{bmatrix} = 3I = det A \cdot I$. so $det A = 3$.

As the cofactor of ais is o, no matter what ais is, det A still no change.

Roblem 5.3.15.

Sal. For n=5, the matrix C contains 25 cofactors, each 4x4 cofactor contains 24 terms and each term needs 3 multiplications, total 1800 multiplication.

Problem 5.3.17.

Rublem 6.1.6

Sul. A-XI = 1 1-2 = (1-2) = 0, 2=1

Let $|B-\lambda I| = 0$, which means $\left|\frac{1-\lambda}{0}\frac{\lambda}{1-\lambda}\right| = (1-\lambda)^2 = 0$, and $\lambda_1 = \lambda_2 = 1$.

Let | AB- \I | =0, then | 1-2 = (1-2)(3-2) - 2=0, so \(\lambda_1 = 2+1\) and \(\lambda_2 = 2-1\)

hence, we can say the eigenvalues of AB is not equal to eigenvalues of A times eigenvalues of B.

Let $|BA-\lambda I|=0$, then $|\frac{3-\lambda}{1}|=(3-\lambda)(1-\lambda)-2=0$, so $\lambda_1=24\overline{3}$ and $\lambda_2=24\overline{3}$. thus, the eigenvalues of AB is equal to the eigenvalues of BA.

Problem 6.1.12.

Seliet $|P-\lambda I| = 0$, which is $\begin{vmatrix} 0.2-\lambda & 0.4 & 0 \\ 0.4 & 0.6-\lambda & 0 \end{vmatrix} = \left[(0.2-\lambda)(0.6-\lambda) - 0.4^2 \right] \cdot (1-\lambda) = 0 \Rightarrow \lambda_1 = \lambda_2 = (1-\lambda) = 0$ and their eigenvector are $\begin{vmatrix} (P-0I)x = \begin{bmatrix} -2 & 4 & 0 \\ -4 & 8 & 0 \end{bmatrix} \cdot x = 0$ gives eigenvector $\begin{bmatrix} -1 \\ 0 \end{bmatrix}$ $(P-1I)x = \begin{bmatrix} -0.3 & 0.4 & 0 \\ 0.4 & -0.2 & 0 \end{bmatrix} \cdot x = 0 \text{ gives eigenvector } \begin{bmatrix} 1/2 \\ 1 \end{bmatrix} \text{ and } \begin{bmatrix} 0 \\ 0 \end{bmatrix}$ they shere some eigenvalue, which means $\begin{bmatrix} 1/2 \\ 1 \end{bmatrix}$ is also a eigenvector)

Roblem . 6.1.15

Sol. By det $(A-\lambda I)=0$, which means $\begin{vmatrix} -\lambda & 1 & 0 \\ 0 & -\lambda & 1 \\ 1 & 0 & -\lambda \end{vmatrix} = -\lambda^3 + 1 = 0$, so $\lambda_1 = 1$, $\lambda_2 = \frac{1+3i}{2}$. For $P = \begin{bmatrix} 0 & 0 & 1 \\ 0 & 0 & 1 \\ 0 & 0 & -\lambda \end{vmatrix} = \lambda^2 (+\lambda) - (1-\lambda) = 0$, so $\lambda_1 = 1$, $\lambda_2 = -1$, $\lambda_3 = 1$.

Problem 6.1.16.

Sol. det A = det (A-0.1) = 2,.2... 2n

Roblem 61.24.

Sul. By $\det(A-\lambda I)=0$, we have $\begin{bmatrix} 2-\lambda & 12 \\ 4 & 2\lambda & 4 \\ 2 & 1 & 2-\lambda \end{bmatrix}=-\lambda^3-6\lambda^2$, so $\lambda_1=0$, $\lambda_2=0$, $\lambda_3=6$.

Let $(P-OI) \cdot X=0$, then $X=\begin{bmatrix} -1/2 \\ 6 \end{bmatrix}$ and $\begin{bmatrix} -1/2 \\ 9 \end{bmatrix}$, which size eigenvectors of the matrix. When $\lambda=6$, let (P-6I)X=0 gives eigenvector $\begin{bmatrix} 2 \\ 1 \end{bmatrix}$.

So $\begin{bmatrix} -1/2 \\ 1 \end{bmatrix}$ and $\begin{bmatrix} -1/2 \\ 1 \end{bmatrix}$ are the eigenvectors of the matrix A.

Problem 6.1.27.

Sul. As rank(A)=1 and trace(A)=4, so the eigenvalues of A are 0.0,0,4. For C, C is a rank 2 matrix, so there exists two eigenvalues are D. As $[1111]^T$ is a eigenvector of $\lambda=2$, with trace(C)=4, we can see another eigenvector is 2, so 0.0,2,2 is the eigenvalues of C.

Roblem 6.1.32.

Sol.(a) As An=0. Av=3 v and Aw=5w, we can say u is a basis for the nullspace, v and w is a basis for the column space.

(b) from Av=3v and Aw=5w, we can see $A(\frac{V}{3}+\frac{W}{5})=V+w$, so $\pi_p=\frac{V}{3}+\frac{W}{5}$, $\chi=\chi_p+\chi_n=\frac{V}{3}+\frac{W}{5}+Cu$, ceR.

(c) If it did, then a would be in the column space.

Problem 1.

Sul. (A) Rut 4 vectors in matrix $A = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & 2 & 4 & 8 \\ 1 & 2 & 4 & 8 \end{bmatrix}$ $det A = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 1 & 2 & 1 & 1 \\ 1 & 2 & 1 & 1 \end{bmatrix} = \begin{bmatrix} 0 & 2 & 0 & 2 \\ 0 & 2 & 0 & 2 \\ 0 & 3 & 3 & 7 \end{bmatrix} = \begin{bmatrix} 0 & 2 & 0 & 2 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 0 & 2 & 0 & 2 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 & 1 \\ 0 & 2 & 0 & 2 \\ 0 & 0 & 3 & 6 \end{bmatrix} = \begin{bmatrix} 1 & 1 &$

Problem 2

Sal. Let det (A-\lambdaI) = 0, so $\begin{vmatrix} 1-\lambda & -2 & 2 \\ 2 & -3\lambda & 2 \\ 2 & -4 & 3-\lambda \end{vmatrix} = \begin{vmatrix} 1-\lambda & -2 & 0 \\ 2 & -3+\lambda & -1-\lambda \\ 2 & -4 & -1-\lambda \end{vmatrix} = \begin{vmatrix} 1-\lambda & -2 & 0 \\ 0 & 1-\lambda & 0 \\ 2 & -4 & -1-\lambda \end{vmatrix} = (-1-\lambda) \cdot (1-\lambda)^2$ So the eigen values of A are 1,1,-1.

For $\lambda = 1$, let $(A-I)\chi = 0$, then $\chi = \begin{bmatrix} 1 \\ 1 \\ 1 \end{bmatrix}$ For $\lambda = -1$, let $(A+I)\chi = 0$, then $\chi = \begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix}$

hence, [] and [] are the eigenvetors of A.

We all know that 2 vectors can't be a basis of R3, so R3 dies not have a basis consisting of eigenvectors for A.
